

4.
Investment in a business

Investment in a business is the purchase of assets that are expected to generate future cash flows. It is a long-term commitment of funds to a business, with the expectation that the investment will yield a return over time. The assets purchased can include physical assets like machinery and buildings, or intangible assets like patents and trademarks. The investment is typically made by a company or an individual, and the funds are usually raised through equity or debt financing. The investment is often made in the form of shares of stock, which gives the investor a claim on the company's assets and earnings. The investment is typically made in the form of shares of stock, which gives the investor a claim on the company's assets and earnings.
