

**Waddington, Robt.**, teacher of mathematics, late mathematical master of the royal academy at Portsmouth. An epitome of theoretical and practical navigation, containing a complete system of that art, greatly improved. (And widely different from the present laborious, and, in some respects, erroneous method of teaching) from self — evident demonstration, founded on many years experience in the several voyages made by the author; etc. (Donation Liechtenstein.) *Lit*

Fol. London 1777.
